

Eco-Dish Auto

Eco-friendly high performance automatic dishwashing agent to effortlessly strip greases and grime from crockery and cutlery. Prolongs life span of machinery and saves time between maintenance cleaning intervals.

Automated Washing Systems

Automatic dishwasher and rinse systems represent a tremendous saving in time, money and effort; they minimize breakage through the reduced handling of dishes; they help keep the kitchen neater and more clutter-free; and clean up processes are greatly simplified. Labour savings are very significant, with a perfect wash occurring every time. Less water is used, and utility consumption can be significantly lowered. These are benefits that have much appeal to commercial kitchens and consumers. However the benefits of an even the very best dishwasher and rinse systems can only be properly realized with the finest specially formulated eco detergents.

Product Description:

Eco-Dish Auto detergent liquid is an environmentally friendly specialty cleaner which is ideally suited to

use in the hospitality industry where its blend of cleaning agents and sequesterants helps to efficiently clean crockery and cutlery, prolong times between machine maintenance cleaning, and extend machinery lifespan.

Product Features:

Eco-Dish Auto detergent liquid is an eco-friendly biodegradable blend of cleaning agents which quickly and easily lift dirt from hard surfaces, like cutlery and crockery. Eco-Dish Auto is easy to meter out through a peristaltic pump (available from Ecozyme) as programmed for this purpose. Eco-Dish Auto will not harm the dishes themselves or the material that the automatic dishwasher machine is made from. Eco-friendly Eco-Dish Auto detergent liquid is low foaming at automatic dishwasher temperatures which promotes the best possible spraying from the pressure nozzles, and thus the best possible contact with the objects to be cleaned.

Water Hardness:

Less than ideal water quality is a major challenge, and water hardness plays a key role in struggling to get effective results. Minerals and other dissolved solids in water present obstacles to good automatic dishwashing results. Hardness minerals can cause spotting and filming on dishware.

They must be effectively tied up or sequestered in the water if the results are to be satisfactory. Eco-Dish Auto is designed to perform exceptionally in areas where water quality and water hardness is an issue. Eco-Dish Auto is intelligently formulated to effectively convert dirt deposits into small suspended particles that rinse away without redepositing on freshly washed plates and cutlery. It is specially designed to form a protective film on metal surfaces in the automatic washer for a greater machine lifespan.

Applications:

Ecozyme Auto-Dish detergent liquid is applied:

- * To clean dishes
- * To clean stainless steel cutlery

Use & Dilutions:

Eco-Dish Auto should be metered through a peristaltic pump for the best results. This will ensure that the correct amount of chemical is used for the most economical operation. For the best results Ecozyme Auto-Dish detergent liquid should be followed during the rinse cycle with Ecozyme Auto-Rinse dishwasher rinse aid in the rinse-water.

For Best Results:

Use with Ecozyme's full range of bio-enzymatic products which benefit each other as you use them.
