

Probiotic Liquid Hand Soap

Forms a long-lasting protective barrier against germs and viruses

Starts working immediately

Forms a 99,9% protective barrier within 24 hours

Keeps working long after conventional disinfectants

Convenient hand pump nozzle system

Benefits septic and plumbing systems

Lasting Probiotic Protection:

Ecozyme Probiotic Liquid Hand Soap is a luxurious cosmetic grade liquid hand soap which contains the power of probiotics for a long-lasting protective barrier on the skin.

Traditional hand disinfectants stop protecting just after application, whereas our probiotics activate immediately and keep working to create an invisible protective barrier which keeps working to eliminate pathogens up to 24 hours after application.

Intelligently formulated to signal when you have sufficiently scrubbed your hands – it turns from a clear liquid into a rich luxurious white foam lather.

ENZYMES CC

Improve Workplace Productivity:

Studies prove that humans now share more common surfaces with each other in history. Enclosed workplace environments are an exponentially higher risk for the spread of germs. Poor hygiene leads to increased illness and this results in disruption cost, lost productivity, and reduced employee efficiency. Hands are the single most effective method of spreading germs, responsible for the spread of 80% of infectious diseases. Effective hand hygiene is universally recognized as the smartest, most cost-effective means of infection control in the workplace, minimizing wasted time and resources, saving organizations money all year round.

Recommended Application:

Wet hands with clean, running water (warm or cold), turn off the tap, and apply soap. Lather hands by rubbing them together. Lather the backs of hands, between your fingers, and under nails. Scrub hands for at least 45 seconds. After a thick, white foam lather has formed, rinse your hands well under clean, running water. Dry using a clean towel or air dry them.
